## EDUCATION

---

### California Institute of Technology, Pasadena, CA

*Ph.D. in Mechanical Engineering*

*June 2010*

Minor: Control and Dynamical Systems

Dissertation: Formal Methods for Design and Verification of Embedded Control Systems

Relevant coursework: Classical Control Theory, Modern Control, Robust Control, Distributed Control, Networked Control Systems, Communication Networks, Dynamical Systems, Manifolds and Tensor Analysis, Robot Kinematics, Robot Navigation and Vision, Formal Software Verification

GPA: 4.1/4.0

Advisor: Prof. Richard Murray

*Master of Science in Mechanical Engineering*

*June 2006*

GPA: 4.1/4.0

Advisor: Prof. Joel Burdick

### Cornell University, Ithaca, NY

*Bachelor of Science in Mechanical Engineering (Summa Cum Laude)*

*May 2005*

GPA: 4.1/4.0 (cumulative), 4.2/4.0 (major)

Advisor: Prof. Raffaello D'Andrea

## HONORS AND AWARDS

---

**Best Intelligent Systems Paper (2011)**

AIAA Infotech@Aerospace Conference

**Powell Fellowship and Henry L. Guenther Fellowship (2005)**

Caltech (scholarship for the first year of graduate study)

**Frank O. Ellenwood Prize (2005)**

Cornell University (awarded to the senior with the highest composite average in heat and power-related engineering courses)

**First Place Winner (2004)**

ASME Student Mechanism Design Competition

**Tau Beta Pi Engineering Honor Society (2003)**

Cornell University

**Dean's List (2001–2005)**

Cornell University

**Royal Thai Scholarship (2000)**

The Ministry of Science and Technology, Royal Thai Government

## GRANTS

---

- Co-principal investigator, “Autonomous Mission Translation, Decomposition and Execution System”, TL Seed Funding R394-000-068-232, S\$50,000, 1 August 2012–31 July 2013.

## RESEARCH INTERESTS

---

- Modeling, design and analysis of distributed, real-time, embedded systems (cyber-physical systems)
- Situational reasoning and decision making in complex, dynamic and uncertain environments
- Distributed cooperative control of multi-agent systems
- Autonomous robotic systems
- Transportation networks

## PROFESSIONAL EXPERIENCE

---

### University of Texas at Austin

Austin, TX

*Research Fellow*

January 2020–Present

*Group: Autonomous Systems*

- Investigate applications of formal methods in autonomous systems, with the focus on their interactions with humans.
- Implement various formal synthesis techniques in a software toolbox TuLiP (<https://github.com/tulip-control/tulip-control>).

### Aptiv

Singapore

*Principal Research Scientist*

October 2018–December 2019

*Team: Chief Scientist Office*

- Developed a behavior validation module to determine whether an autonomous vehicle exhibits correct behaviors based on prioritized traffic rules.
- Redesigned the motion planner, the decision making component and the planner-controller interface to ensure that autonomous vehicles respect formal behavior specifications derived from traffic rules and human-driven behaviors. The new design focuses on the modularity and scalability of the planning-control architecture to allow different algorithms to be implemented, tested and evaluated quickly and independently.
- Supervised junior researchers on projects related to planning, decision making and controls.

### nuTonomy

Singapore

*Principal Research Scientist, Team Lead*

October 2015–October 2018

*Team: Planning*

- Led the planning and decision-making team with members in Boston and Singapore.
- Designed, implemented and maintained a motion planner and decision making logic based on the minimum-violation planning approach with the goal of providing a correctness guarantee of the autonomous vehicles with respect to a given set of traffic rules.
- Developed and maintained a controller for autonomous vehicles to closely follow the motion planner generated paths.

## Thailand Center of Excellence for Life Sciences

Bangkok, Thailand

*Project Manager*

February 2014–September 2015

*Group: Medical Robotics*

- Promoted and supported commercialization of innovations and research.
- Developed Medical Robotics Technology Development Roadmap.
- Collaborated with private and academic partners to develop and commercialize medical robots, including an automatic drug dispensing system and an elderly care robot.

## Singapore-MIT Alliance for Research and Technology

Singapore

*Postdoctoral Associate*

October 2010–December 2012

*Group: Future Urban Mobility*

*Advisor: Prof. Emilio Frazzoli*

- Built an autonomous vehicle testbed to demonstrate the role of autonomy in mobility-on-demand
- Developed a sensor package enabling perception (navigation and situational awareness) for an autonomous vehicle, at a cost that is a fraction of that of current systems with similar capabilities by exploiting prior knowledge of the environment as well as the availability of the existing infrastructure such as cellular networks and traffic cameras.
- Investigated new transportation pricing strategies to reduce traffic congestion.
- Developed methodologies to control traffic light signal timing for multi-junctions zone using real-time sensor feedback on vehicle flow status.

## California Institute of Technology

Pasadena, CA

*Postdoctoral Scholar*

June 2010–September 2010

*Project: Specification, Design and Verification of Distributed Embedded Systems*

*Advisor: Prof. Richard Murray*

- Investigated the use of formal methods in the specification, design and verification of the vehicle management systems in modern avionics.
- Developed a software toolbox TuLiP (<https://github.com/tulip-control/tulip-control>) for formal synthesis of embedded control systems, incorporating receding horizon temporal logic planning.

*Research Assistant*

June 2006–May 2010

*Project: Specification, Design and Verification of Distributed Embedded Systems*

*Advisor: Prof. Richard Murray*

- Investigated the control, specification and verification of distributed embedded systems operating in physical environments.
- Developed a technique for safety verification of periodically controlled hybrid systems, a subclass of hybrid systems frequently encountered in applications involving embedded system with periodic sensing and actuation.
- Applied formal methods (model checking and theorem proving) to verify correctness of several components of Alice, an autonomous vehicle that competed in the 2007 DARPA Urban Challenge.
- Proposed a methodology for automatic synthesis of embedded control software that provides a formal guarantee of system correctness, with respect to its requirements expressed in linear temporal logic.
- Introduced a receding horizon framework for linear temporal logic (LTL) specifications to alleviate the computational complexity associated with LTL synthesis.

*Research Assistant*

July 2005–September 2005

*Project: Distributed Cooperative Control of Multiple Vehicle Systems over Wireless Networks*

*Advisor: Prof. Joel Burdick*

- Investigated the use of communication-based coordination of automobiles to minimize traffic accidents, reduce traffic congestion and increase driver safety and comfort.
- Developed a path planning approach based on potential field for navigating an automobile on a highway. The controlled vehicles attempt to maintain a certain default speed to keep traffic moving while avoiding other cars and changing speed and lanes as appropriate.

**Nanyang Technological University**

Singapore

*Visiting Researcher*

July 2009–September 2009

*Project: A Consensus Approach to the Assignment Problem*

*Advisor: Prof. Lihua Xie*

- Developed a consensus-based technique to solve the assignment problem in a completely distributed manner without any central management or global knowledge.
- Applied the proposed technique to the mobile sensor dispatch problem.

**Cornell University**

Ithaca, NY

*Research Assistant*

August 2004–May 2005

*Project: Robot Motion Planning*

*Advisor: Prof. Raffaello D'Andrea and Dr. Venkatesh Rao*

- Developed dynamic refinement techniques that transform the polygonal path computed by a geometric planning layer into a feasible trajectory for a specific vehicle by fitting suitable geometric primitives.

## DESIGN EXPERIENCE

---

**Team Caltech, California Institute of Technology**

Pasadena, CA

*Systems Team Leader*

June 2006–November 2007

*Project: DARPA Urban Challenge*

- Worked with a team of approximately 50 people on the Caltech's entry in the 2007 DARPA Urban Challenge, a race for unmanned, autonomous vehicles in complex urban environments.
- Coordinated the Systems Team consisting of undergraduates, graduate students and researchers from the Jet Propulsion Laboratory and Northrop Grumman Corporation. The team is responsible for systems engineering (system-level communications and architecture, including the canonical software architecture), health and contingency management (framework for responding to failures), system testing (test harnesses, field testing, log analysis), and simulation and visualization (tools for simulating the system and the environment and visualizing system state).
- Member of the Integrated Product Team responsible for systems engineering activities such as requirements and specifications development, functional analysis, system architecture and system design, and trade studies.
- Designed and implemented the mission management subsystem capable of reasoning about complex, uncertain, spatiotemporal environments and making decisions that enable autonomous missions to be accomplished safely and efficiently, with ample contingency planning.
- Designed and implemented the decision making logic of the planning module.

**Sibley School of Mechanical and Aerospace Engineering, Cornell University** Ithaca, NY

*Team Member*

January 2004–May 2005

*Project: Snake Arm*

- Worked with a team of approximately 20 students to design, construct, and control a versatile multi-segmented robotic arm capable of operating in complex environments and responding to dynamic conditions.
- Responsible for the control and computer science components of the project.
- The project won first place in the 2004 nationwide ASME Student Mechanism Design Competition held in Salt Lake City, Utah from September 28th to October 2nd.

## TEACHING AND MENTORING EXPERIENCE

---

**European Embedded Control Institute (EECI)**

Istanbul, Turkey

*Lecturer*

9–13 March 2020

*Course: Specification, Design, and Verification for Self-Driving Cars*

**European Embedded Control Institute (EECI)**

L'Aquila, Italy

*Lecturer*

14–18 May 2012

*Course: Specification, Design, and Verification of Distributed Control Systems*

**Urban Transport Programme, SIM University**

Singapore

*Thesis Advisor*

December 2011–March 2012

*Thesis Title: An Evaluation of the Effectiveness of Electronic Road Pricing in Singapore*

**European Embedded Control Institute (EECI)**

Supélec, France

*Lecturer*

21–25 March 2011

*Course: Specification, Design, and Verification of Distributed Embedded Systems*

**California Institute of Technology**

Pasadena, CA

*Research Mentor*

June–September 2008

*Summer Undergraduate Research Fellowships program*

*Project: Automatically Synthesizing Supervisory Control of Alice from Linear Temporal Logic Specifications*

*Teaching Assistant*

October 2006–May 2007

*Course: Introduction to Multidisciplinary Systems Engineering*

*Research Mentor*

June–September 2007

*Freshmen Summer Institute*

*Project: Dealing with Inteseccgen Deadlock*

*Research Mentor*

June–September 2006

*Freshmen Summer Institute*

*Project: Trajectory Planning in Uncertain, Dynamic Environments*

## PROFESSIONAL ACTIVITIES

---

### Workshop/Invited Session organizer

- “Formal Methods in Control”, IEEE Conference on Decision and Control (CDC) 2012
- “Formal Methods for Design and Verification of Aerospace Systems”, AIAA Infotech@Aerospace Conference 2012
- “Verification and Validation of Aerospace Systems”, AIAA Infotech@Aerospace Conference 2011
- “Formal Methods for Robotics and Automation”, IEEE International Conference on Robotics and Automation (ICRA) 2010

### Reviewer

- Autonomous Robots, Control and Intelligent Systems Journal, IEEE Robotics and Automation Magazine, IEEE Transactions on Automatic Control, IEEE Transactions on Control of Network Systems, IEEE Transactions on Intelligent Transportation Systems, IEEE Transactions on Robotics, International Journal of Robotics Research, Mathematical Structures in Computer Science, SIAM Journal on Control and Optimization, Unmanned Systems, American Control Conference (ACC), Automation and Mechatronics (CIS-RAM), International Conference on Unmanned Aircraft Systems (ICUAS), International Conference on Control and Fault Tolerant Systems (Sys-Tol), IEEE Annual Conference on Intelligent Transportation Systems (ITSC), IEEE Conference on Decision and Control (CDC), IEEE International Conference on Robotics and Automation (ICRA), IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS), International Federation of Automatic Control (IFAC), Hybrid Systems: Computation and Control (HSCC), Mediterranean Conference on Control and Automation (MED), Robotics Science and Systems (RSS), Workshop on Control of Cyber-Physical Systems

### Committee/Board Member

- Associate member of the AIAA Intelligent Systems Technical Committee (ISTC)
- Robotics Science and Systems, Program Committee
- NASA Formal Methods Symposium, Program Committee
- Unmanned Systems, Editorial Board Member
